

⚡ FlipFlow — Screenshot to Profit

A two-phase Streamlit app powered by Claude Vision for resale flippers.

Setup (takes ~2 minutes)

1. Install dependencies

```
pip install streamlit anthropic
```

2. Run the app

```
streamlit run app.py
```

3. Enter your API key

- Open the sidebar (top-left arrow)
 - Paste your Anthropic API key (`sk-ant-...`)
 - Get a key at: <https://console.anthropic.com>
-

How it works

Phase 1 — Browse Mode

1. Drop screenshots (FB Marketplace, OfferUp, Amazon, store shelves)
2. Optionally enter your planned purchase price
3. Hit **Quick Profit Check**
4. Claude Vision analyzes each screenshot → returns item name, detected price, resale estimate, profit, margin %, and verdict (🚀 Strong / Decent / ⚠️ Low)
5. Summary dashboard shows total potential profit if you buy everything

Phase 2 — Sell Batch

1. On any Quick Check result, click " **I Bought This**"
 2. Upload real photos of the item, confirm actual cost, add notes
 3. Claude re-analyzes → generates optimized FB Marketplace title & description, recommended price, market score
 4. Item appears in your **Sell Batch** table
 5. Track status: Not Listed → Listed → Sold
 6. When Sold: enter actual sell price → real profit auto-calculated
 7. **Export CSV** for Facebook Marketplace bulk upload
-

Data & Security

- API key is stored **only in browser session memory** — never written to disk
- Item data is saved locally to `flipflow_data.csv` in the app folder
- Photos are sent to Anthropic's API for analysis and not stored locally
